New Appliance Measurements Form

1. Measure the height and width of the exterior door.

Measure with the front door **open**, and measure inside the door frame to where the door is.

Door Height: _____

Door Width: _____

2. Measure all doorways that must be passed through to get from the doorway to the kitchen.

Measure with the any interior doors **open**, and measure inside the door frame to where the door is.

Door Height: _____

Door Width: _____

3. Make sure that you have, at least, a 3-foot-wide clear path from the front door to the location where the new appliance will go.

Be sure to take into account anything that is in the path—countertops, doorways, furniture, etc. The install team will need a full **36" path cleared of all items**.

4. Measure the space where the new appliance will go.

For appliances, be sure to measure the height and width of the space where the appliance will go taking into account any cabinets that may be on the side and/or top of the appliance.

Width of space: _____ Height of space: _____ Depth of space: _____
